

Skybrook Residents,

The Davey Tree Expert Company is pleased to offer an exclusive discount program for the pruning and maintenance of your neighborhood street trees. Utilizing the Davey Tree Company ensures that your trees are pruned correctly and that any pest treatments are applied during the ideal time frame, with the correct material.

Contacting Davey Tree begins the process of having your trees inspected by the I.S.A. Certified Arborist that services your community. Having a Certified Arborist on site not only allows for proper diagnosis and treatment options, it can also save you money by confirming that your tree is indeed healthy and will not need treatment at that time.

Skybrook's dense canopy provides many environmental and aesthetic benefits and will continue to thrive paired with proper maintenance and care. Below is an outline of treatments for the trees throughout your neighborhood. Again, for discounted rates, please contact our office at 704-596-8065 to have your street trees added to our inspection agenda.

### **Red Maples**

-Many of the Red Maples throughout the community are infested with Gloomy Scale. This scale gives the appearance of having "salt and pepper" sprinkled on your trees. While difficult to control with foliar sprays, Davey Tree utilizes the practice of injecting the correct product into the root zone of the tree so that the tree systemically absorbs the material.

-Another common issue with your Red Maples is the visible decay (often towards the base of the tree) that is associated with Canker. Although not able to be cured, proper fertilization can ensure that the remainder of the tree continues to thrive.

### **Cherry Trees**

-Many of the Cherry trees in the neighborhood are also ailing from "Bleeding Cankers". Again, although not able to be remedied, annual deep root fertilization can serve to strengthen the rest of the tree.

### **White Oaks/Willow Oaks/Etc.**

-Depending on the species of Oak along your street, some of the common issues associated with these trees is the infestation of Lecanium Scale. This scale is effectively treated utilizing injections into the root zone of the tree.

### **Chinese Elm**

-Aside from proper pruning, these trees are fairly maintenance free. If you have a tree that is ailing, it can often be remedied with annual deep root fertilization and proper watering.

Please contact your local Davey Tree office at **704-596-8065** or by e-mail at **CharlotteResidential@Davey.com** to have your trees added to our inspection agenda.
